

## 73fifty - BLACKBOX

**The 73fifty Black Box is a cost effective DVR replacement for the analogue VCR suitable for HSE recording requirements.**

The **73fifty** Black Box recorder is a refinement of the VCR replacement **73fifty**. The Black Box version has been designed specifically to replace the use of the VCR for recording Black Box video. No longer will someone have to remember to change over the tape, as the recorder will just keep recording until it is stopped. There will be no more poor quality recording, the result of using the same tape over and over again, as the quality of every file will be like an original recording. In addition, the video will be instantly available to replay or download to a PC via the USB port.

Benefits of the **73fifty** Black Box include

- Direct replacement for a VCR
- Loop recording for minimum 48 hours
- No more continuous tape changing
- No more recycling tapes affecting quality
- MPEG2 format
- Selectable bit rates
- 1U high 19" rack mountable
- Easy to understand VCR type controls
- Instant review of current file
- Playback of video from recorder
- Download video to PC via USB
- Pass through video and audio connectors
- Large internal hard drive
- Compatible with NETmc Marine video overlays

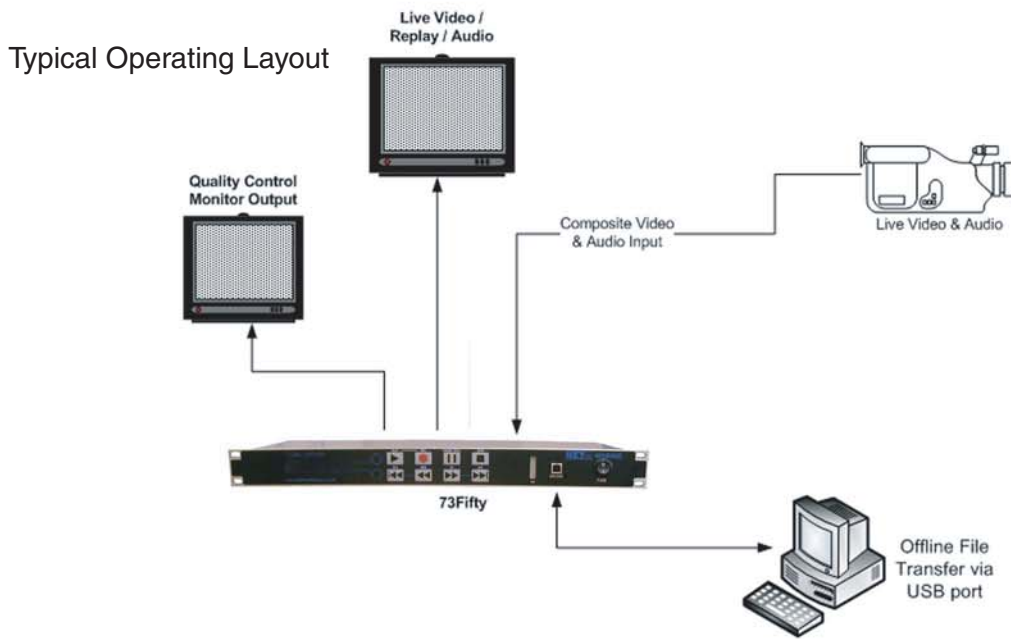

The **73fifty** Black Box DVR is completely compatible with NETmc Marine **Video-TXT** video overlay.

A front panel mounted USB interface coupled with easy to use download software allows the user to transfer files from the **73fifty** directly onto a desktop PC or Laptop.

Specification:
