Survey Equipment

The Digital Video Survey was performed on 8th April 2003, using 3 video cameras connected to NETmc Marine Ltd DVR pro and mediaNAS for recording and geo-referencing. Position information was provided by the miniPOS Inertial Navigation System (INS) supplied by CDL. The INS was constantly updated using a csi DGPS Max receiver supplied by Positioning Resources Ltd. MAPIX technologies Ltd supplied the GIS software and coordinate conversion interface between the positioning and video recording systems.

Chart produced using ESRI's ArcView 8.

Reference Datum: UK National Grid
Scale: 1 : 10,000
